Q1: What are the different types of glass? A1: There are several types of glass, including float glass, laminated glass, tempered glass, and insulated glass. Each type has specific properties and applications.

Q2: What are the benefits of using laminated glass? A2: Laminated glass offers enhanced safety and security. It remains intact even when shattered, preventing sharp edges and debris from flying out.

- Provides superior safety and security
- Resists fire and heat
- Reduces noise and improves acoustic performance
- Enhances UV protection and energy efficiency

Q3: What are the advantages of tempered glass? A3: Tempered glass is stronger and safer than regular glass. It is heat-treated to increase its strength.

Q4: What are the typical thicknesses for different glass types? A4: Common thicknesses include 10mm, 12mm, 15mm, and 19mm for standard applications.

Q5: How do you determine the right glass type and thickness for a project? A5: Factors to consider include building codes, climate conditions, and the specific requirements of the project. Consulting with a professional is recommended.

- PVB: Used for laminated glass, providing safety and security.
- SGP: High-strength interlayer for laminated glass.
- Etched: Provides a decorative, textured surface.

Q6: What are the typical applications for these glass types? A6: Applications include automotive windows, architectural facades, and interior partitions.

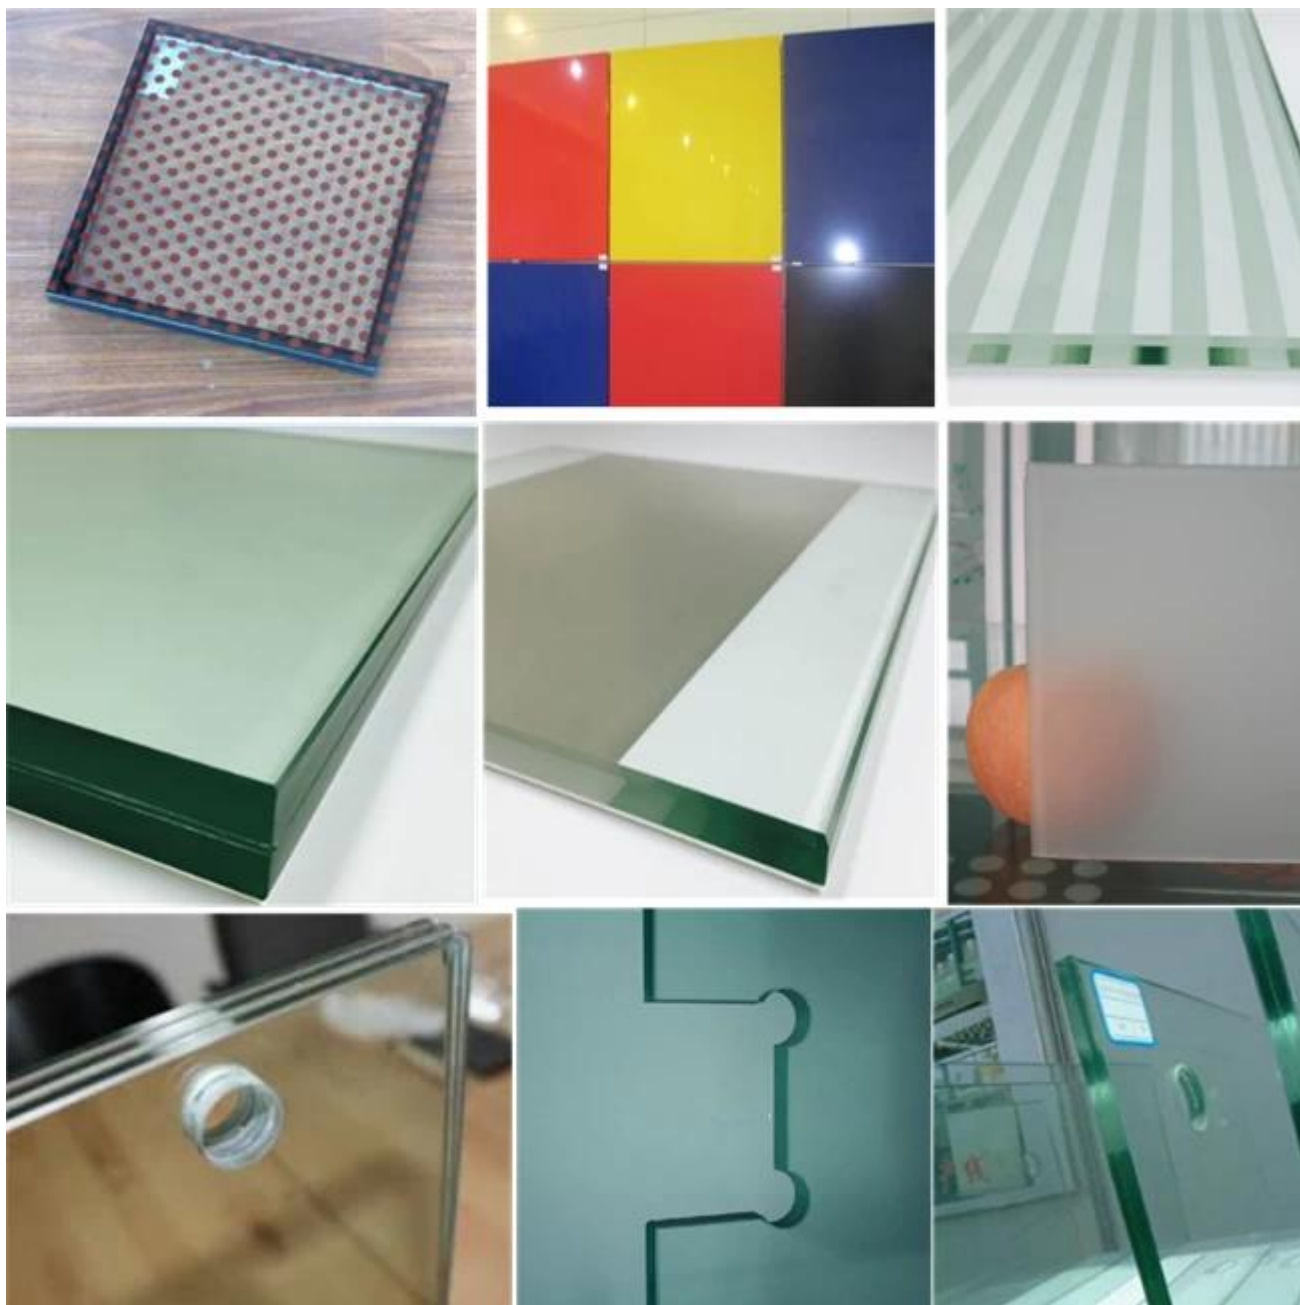

Q7: How do you ensure the quality of the glass? A7: Quality control involves inspecting for defects, ensuring proper manufacturing processes, and testing for strength and performance.

Q8: What are the dimensions and weight of the glass? A8: Standard dimensions are 2440 x 8000 mm, with a weight of approximately 1300 kg for thick glass.
