

Full solution of frameless glass entry door, office door, glass swing door with floor spring.

As we know sliding glass door is very popular in our modern life.

But if you want a swing door for your entrance, floor spring is indispensable.

Why floor spring is mostly suggested for entry door?

1. The turbine of the floor spring can rotate in the positive direction, so generally the gates of banks and companies use floor springs, which can facilitate the people in and out.
2. The floor spring has a small footprint, saves space and is easy to install.
3. The floor spring can be installed firmly in glass door, opening and closing is very easy, No noise is generated when it's be used.

Which points should be paid attention to when we use floor springs?

1. Choose the correct floor spring.

Different door size and weight should be with different type floor spring matched. If the Loading capacity of the floor spring is not big enough for the door, the door may be not stable after installed.

2. Measure the correct door opening size to the manufacturer.

3. Correctly install the floor spring

During installation, holes of appropriate size should be drilled in the ground and in top of the door, the door leaf should be kept vertical, and the vertical rotation axis of the floor spring should coincide.

Only after correctly installed, the door can be easily opened and closed, with no noise.
