

Good quality 4mm silver reflective coated glass

Introduction

4mm silver reflective coated glass, also call 4mm clear reflective glass, made by coating one or more layers of metal (such as chromium, titanium) or metal compound film on the glass surface to change the optical properties of the glass, to meet a specific requirement. It's a kind of solar control glass, could help save energy.

Features

- 4mm silver reflective float glass, could control the solar energy perfectly, has appropriate transmittance for visible light, higher reflectivity for infrared ray, and higher absorption rate for ultraviolet;
- 4mm clear reflective coated glass, it's sun control glass, limits heat penetration into the building, make the interior much more comfortable;
- 4mm online transparent reflective glass, it's hard coating [reflective glass](#), the coated film is durable, not easy to scratch off, so it is good to deep process like cut to size, tempered, laminated, insulated, etc.

Specification

Available standard size: 2140x3300mm, 2250x3300mm, 2140x1650mm, 2250x1650mm, 2440x1650mm, 2440x3300mm, and any customized size could be produced.

Application

4mm silver color heat reflective glass is a kind of energy saving reflective glass, with stable physical and chemical properties, can be widely used on buildings, like cut to size used as [glass doors and windows](#), make silver color [reflective insulated glass](#) used as exterior glass curtain walls, make silver color [reflective laminated glass](#) used as glass skylights, etc.
