

## Wholesale prices of 4mm white Lacquered Glass Manufacturers

Lacquered glass, also named back painted glass, spandrel glass, varnished glass, is very expressive decorative glass, usually used on interior decoration and furniture decoration.

### How to make white Lacquered glass?

4mm white Lacquered glass is made by the top quality [4mm clear float glass](#) or 4mm extra clear float glass/ [low iron float glass](#), through depositing a highly durable and resistant lacquer onto the flat and smooth surface of the glass, then by carefully baking into the furnace which is constant temperature, permanently bonding the lacquer onto the glass. Lacquered glass has all the features of the original float glass, but also supplies wonderful opaque and colorful decorative application.

### Lacquer Glass Characteristic

- Water resistance, excellent stability against acid and alkali resistance
- Use of environmentally friendly paint, health and safety
- Adhesive force is very strong, not easy to fall off
- Good Non-slip performance
- Anti-UV, anti-aging the color is strong
- Various color selection
- Strong weatherability and strong compatibility with structural adhesive
- strong resistance to soiling, easy to clean

### Lacquer Glass Specification

### Difference Between the Lacquer Glass and [Screen Printing Glass](#)

- Both lacquer glass and silkscreen glass are [decorative glass](#), could do any color and any pattern
- Lacquer glass is produced by depositing lacquer onto the glass, then baking into the furnace, screen printed glass is produced by silk-screen printing ceramic frit paints onto glass, then drying and heat-treating
- Lacquer glass has smooth and flat surface, the surface of silkscreen glass will have little impurities because of heat-treating
- The surface of lacquer glass is easy to scratch off, but the surface of silkscreen glass more stronger, hard to scratch off

Lacquered glass has all the features of original float glass, and screen printing glass has all the features of tempered glass

- Lacquer glass most often use in interior, silkscreen glass most often use in exterior because of the durable surface
