

China high quality 6mm silk screen printing glass for building decorative

Silk screen printed glass, is according to the silk screen principle, put the ink is printed on the surface of the flat glass, and then using curing ink measures, making the pattern solid and durable. High temperature silk screen glass, the ink must be screen-printed before passing through the tempering furnace, after tempering processed, the ink and glass surface fused together, the color/ pattern never drop off,durable in use.

Confirming orientation is very important, especially printed the lines or other pattern which need to tell us the vertical orientation of pattern, and must be provide the design drawing before production.

6mm high silk screen printed tempered glass feature:

- 1.The color and pattern is very strong & durable outstanding effect
2. Painted surface is very smooth,easy to cleaning
3. Various color and pattern as per desire(customized)
4. The intensity refers to the impact force 4-5 times than normal float glass.
5. Its safety and breaking into small pieces doesn't hurtful.

Specification:
