

China 6mm Obscure Acid Etched Glass Factory

About 6mm Acid Etched Glass

The 6mm acid etched glass is produced by corroding the surface of 6mm float glass panels to get the obscure fog effect. This glass has consistent quality and durability outlook, which offers a lot of opportunities to architects, interior designers and decorators. Our acid etched glass is fingerprint free, has smooth surface and translucent satin appearance, which allow the light transmit but maintain the privacy.

6mm Acid Etched Characteristic

- Non fingerprint glass
- Consistent finish and translucent appearance
- Uniformly smooth and silky surface, easy to clean
- Maintaining privacy but allow high light transmit
- Does not peel or discolor like films
- Not easy to scratch off like coating

Difference Between Acid Etched Glass And Frosted Glass

- Both acid etched glass and frosted glass crates translucent appearance, but have high light transmittance
- The acid etched glass is produced by chemical corroded, the frosted glass is produced by physical sandblasted
- The acid etched glass has uniformly smooth surface, the frosted glass surface is rough, it is not easy to clean when it is dirty

6mm Acid Etched Glass Specification

Color: clear, ultra clear, grey, green, blue, bronze

Size: 2440*1830mm, 3300*2140mm, 3300*2250mm etc. Any customized size
