

China factory high strength safety bullet proof glass doors bulletproof windows with good price

You may wonder, how does bullet proof glass work?

Ordinary glass

Bulletproof glass

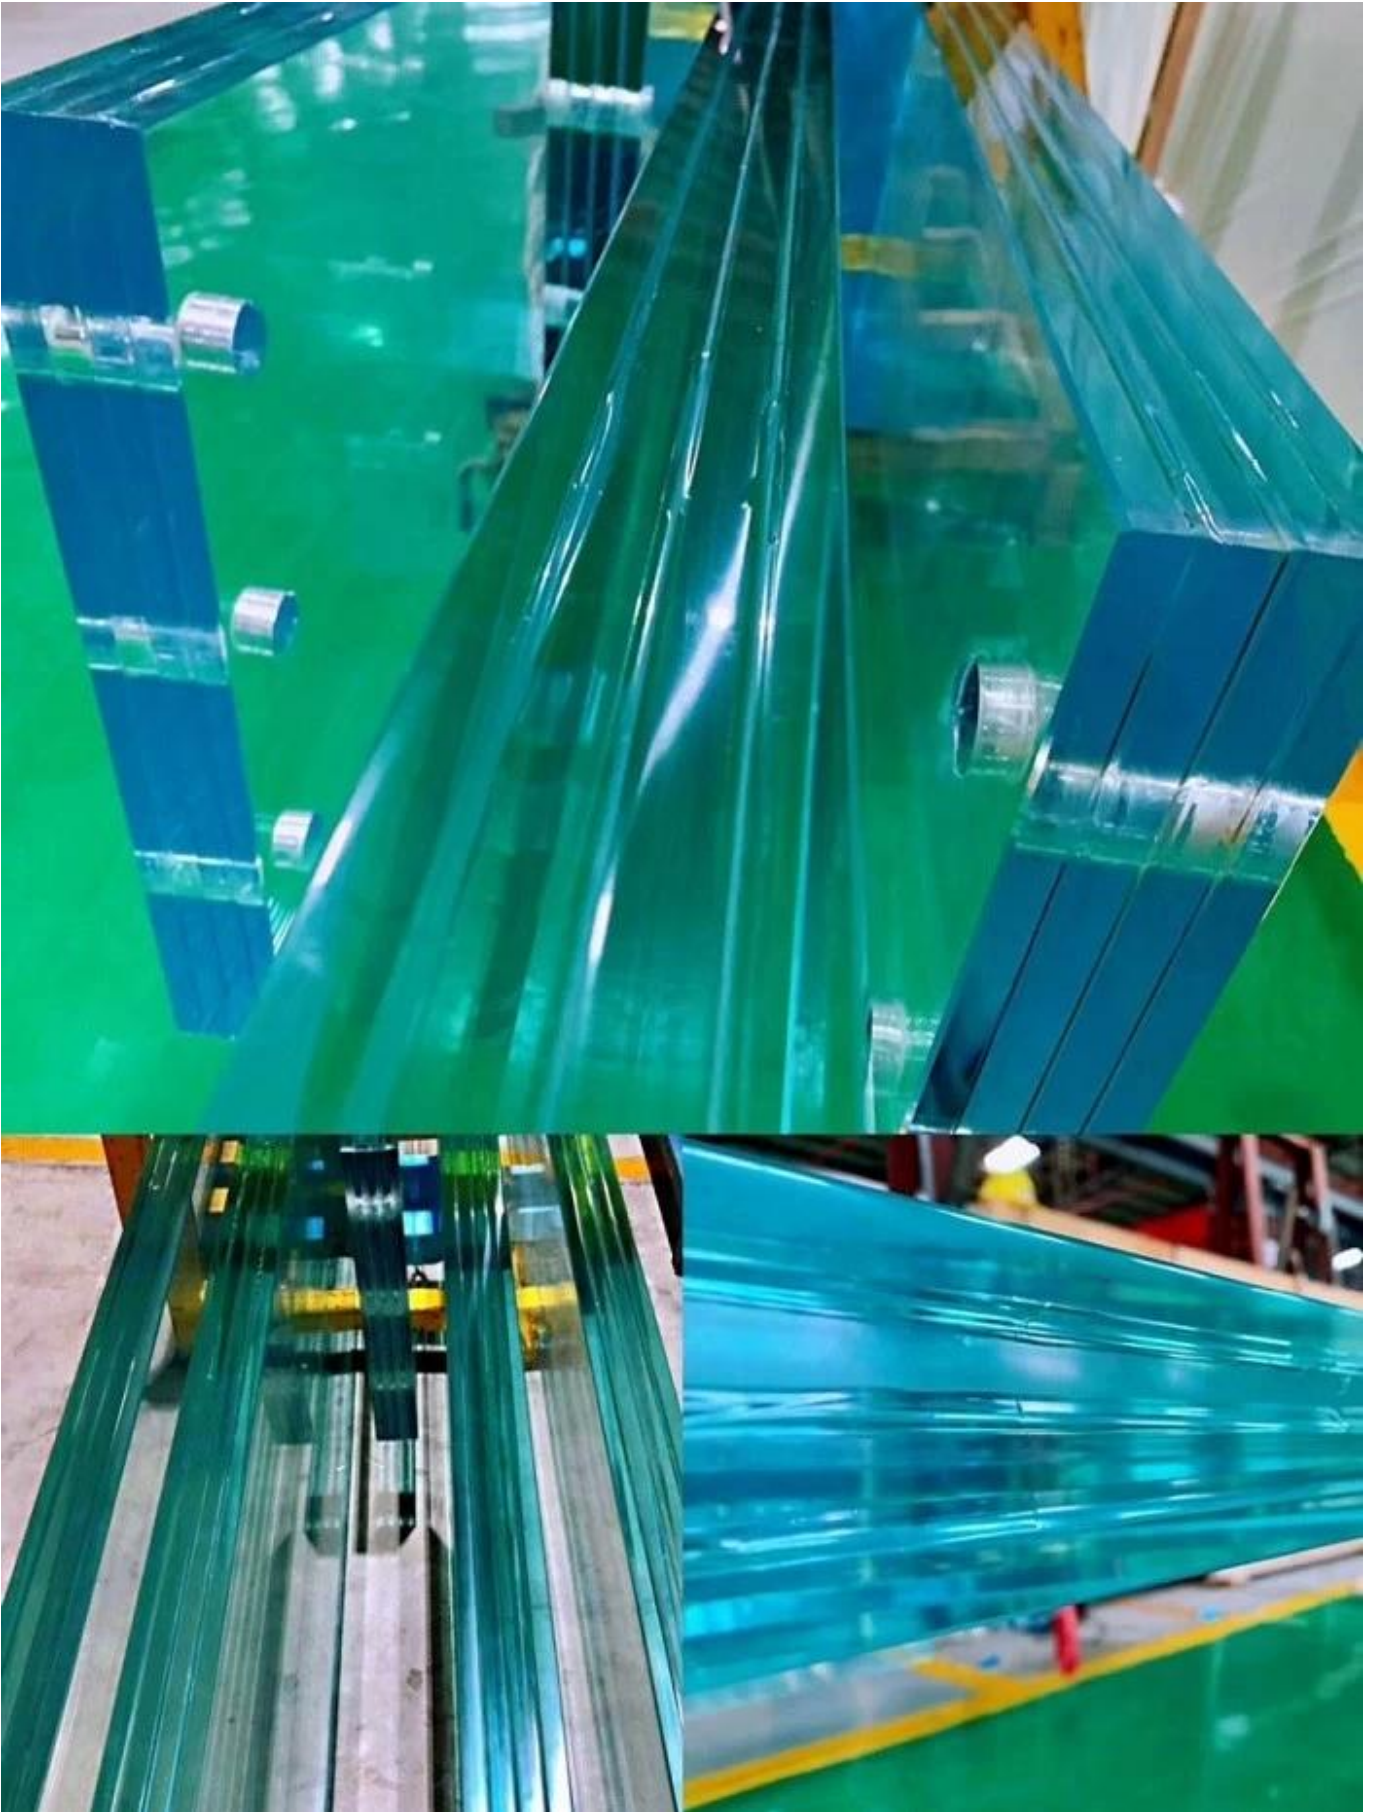

The above is normal tempered glass or single panel glass. When bullet penetrates, it just keeps going on its own direction.

When bullet impacts bulletproof glass, due to the plastic interlayers absorbs energy, bullet will stop very quickly.

Bullet proof glass is usually made from a combination of two or more layers of glass which laminated by several interlayers of pvb or sgp materials. Usually people will choose normal clear glass for composing. But ultra clear glass will make the bullet proof glass more clearer and crystal appearance.

Usually bullet proof glass thickness is ranging from 18~70mm depending on client's requirements.

Bulletproof glass is usually used as protection when there is security is needed. Such as bank and jewelry store and embassies and military usages.
