

Double glazed glass panels manufacture to consume less energy in home or office.

About double glazed glass

Double glazed glass consists of two panes of tempered glass separated by a spacer. The space between the two (or three) glass is filled with dry air or a noble gas. These are most often used in residential window applications. Products can be combined by color reflective tempered insulated glass, low e tempered insulated glass, color reflective tempered laminated insulated glass, etc.

Dual double glazed pane windows keep the heat out during the summer and cold out during the winter, cutting down energy use.

Features

- 1 □ Stay strong while be impacted ,and shattered in pieces.
- 2 □ Low Emisive coating to make the light soft and glass with good insulation
- 3 □ High efficiency in energy saving and soundproof environment production

Application

- External use of windows, doors, skylight, roof, curtain wall, etc.
