CLEAR FLOAT GLASS

Brief Introduction
 Clear float glass is the most basic product for most of common glass products. It is obtained from the manufacturing process where molten glass is floated over the furnace and floated evenly onto a bed of molten tin. The glass is gently cooled under controlled conditions to anneal the glass which enables the glass to be cut and modified.

Characteristics

- Optical clarity with high light transmission
- Smooth and distortion free flat surface
- Easily fabricated like cut, tempered, laminated, etched, etc.
- Flexible specification to various glass size

Clear Float Glass

TINTED FLOAT GLASS

Brief Introduction
 Tinted float glass is produced by adding metal oxides during the manufacturing of clear float glass. Tinted glass absorbs and re-radiates solar energy reducing heat, providing most efficient climate control. It also reduces sun glare and is aesthetically appealing.

Characteristics

- Low UV transmittance rate and good solarshade efficiency.
- Protecting furniture and furnishings from fading.
- Reducing solar glare and heat transmission.
- Provides varied degrees of solar control and energy saving.
- Can be cut, bent, tempered, heat strengthened and laminated.
