

FRP Reinforcement Mesh

FRP Reinforcement Mesh is a composite material made of glass fibers and resin. It is used for reinforcing concrete structures. The mesh is made of woven glass fibers and is available in various sizes and thicknesses. It is used for reinforcing concrete structures in various applications, such as bridges, roads, and buildings. The mesh is easy to install and provides excellent strength and durability. It is also resistant to corrosion and fire. The mesh is available in various colors, including blue, green, and white.
