

6 + 6 mm 12A

6 + 6 mm 12A (6 mm glass / 12 mm air gap / 6 mm glass) (Low e coating on the inner surface of the inner pane) (Low e coating on the inner surface of the inner pane)

6 + 6 mm 12A

6 + 6 mm 12A (6 mm glass / 12 mm air gap / 6 mm glass) (Low e coating on the inner surface of the inner pane) (Low e coating on the inner surface of the inner pane)

6 + 6 mm 12A

1. Size: max 2500x4000mm 180x350mm
2. Glass thickness: 6 mm + 6 mm
3. Gas: Argon or Krypton
4. Coating: Low-e coating on the inner surface of the inner pane
5. Spacers: 12 mm spacer bars 6A, 9A, 16A, etc. (1/4", 11/32", 1/2", 5/8")

6 + 6 mm 12A

Low e windows

Low e windows reduce heat loss by 94% and block ultraviolet rays. They are made of two glass panes with a thin layer of low-emissivity coating on the inner surface of the inner pane. This coating reflects heat back into the room, keeping it warm in winter and cool in summer. Low e windows are available in various sizes and configurations, including single and double glazing, and are suitable for a wide range of applications.
