

4mm Euro bronze color reflective float glass from China

Introduction about 4mm Euro bronze reflective float glass

4mm Euro bronze reflective glass also name as 4mm light bronze reflective glass, 4mm Euro bronze hard coated glass, 4mm Euro bronze one way reflected glass. 4mm online bronze reflective float glass is produced from multi-metal coatings on the float glass as raw material. A coating is applied during glass manufacture. Through the application of vacuum coating, it effects in different optical and calorific features and absorbs and reflects a major proportion of the sun's direct energy more effectively than tinted glass. So it's also well known as energy saving glass.

What do you know about hard coated glass?

Hard coated reflective glasses, known as that coating is applied when the glass is manufactured, it is an online coating process. In this process of coating, the glass is fused into the glass at 650-700 degree celcius, and on cooling, the coating becomes a part of the glass. The mainly advantage of hard coated glass is the durability, it could also be processed like normal/annealed glass, easily heat strengthened, toughened, insulated, laminated or curved.

Specification:

Thickness: Except 4mm Euro bronze reflective glass, you can also get [5mm bronze color reflective glass](#), 5.5mm Euro bronze reflective float glass, [6mm Euro bronze online reflective glass](#) etc.

Color: Euro bronze, other available color such as dark bronze, Euro grey, dark grey, F green, dark green, Ford blue, dark blue.

Available size: 2140*3300mm, 2140*1650mm, 2250*1650mm, 2440*1650mm, 2250*3300mm, etc., any customized size could be cut.

Deep processing: Easy to be cut, tempered, laminated, insulated, etc.

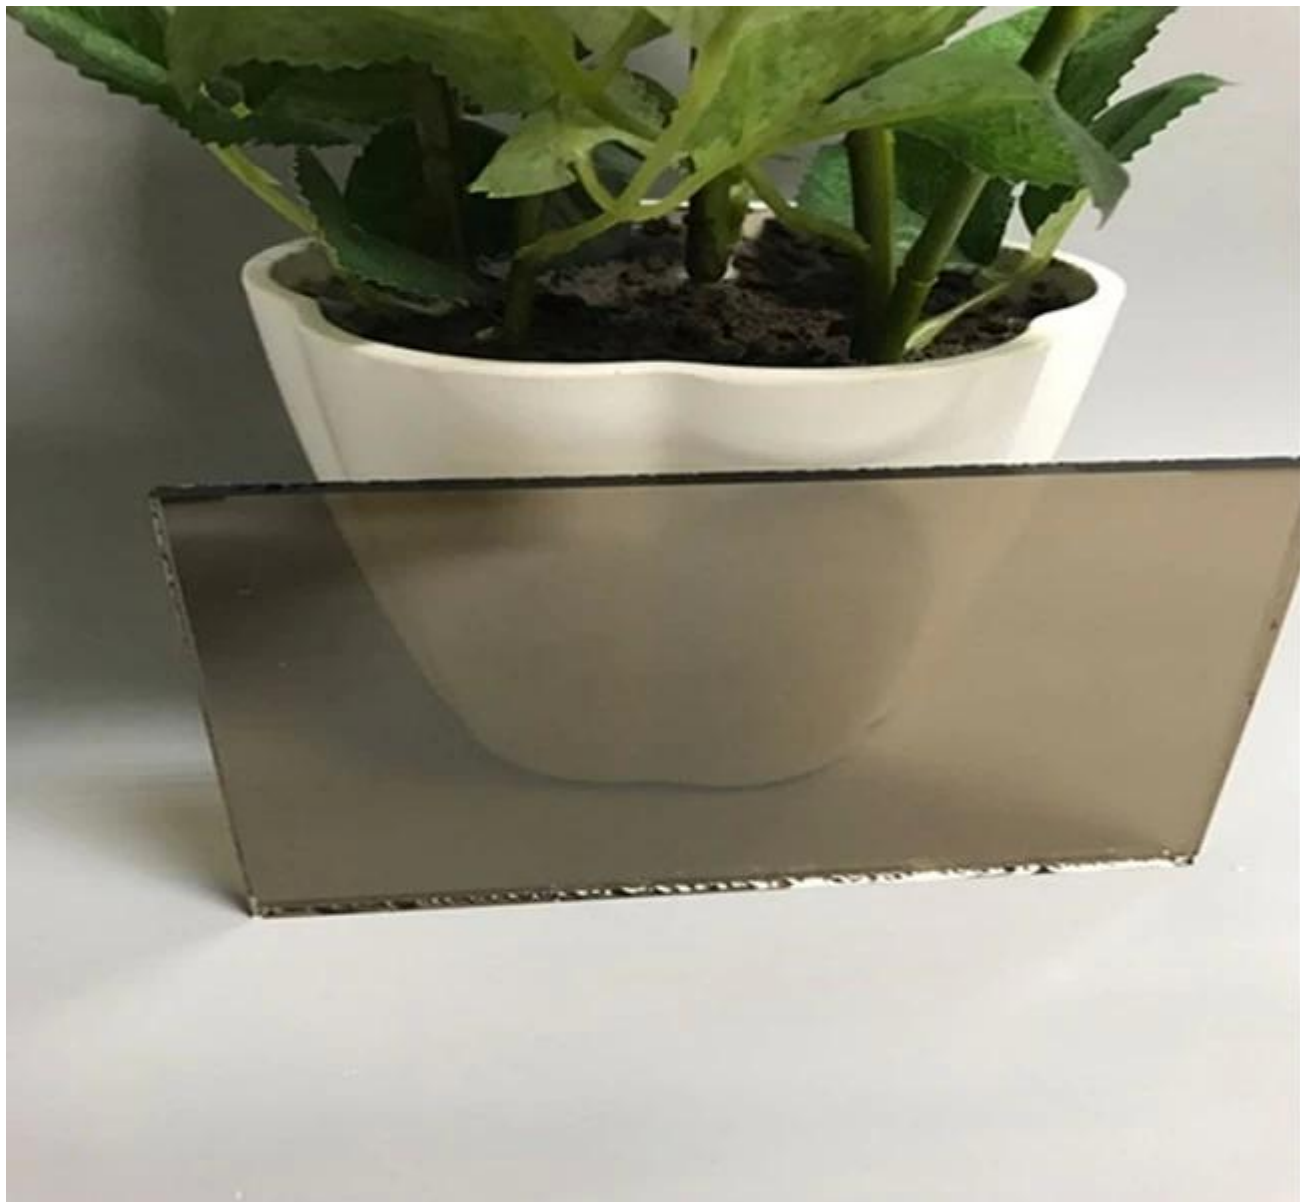

Characteristic

1. High visible light transmitting rate, low reflecting rate.
2. Anti sun UV ray, prevent interior furniture to be faded.
3. Control solar energy radiation effectively, and have good effect of heat preservation and energy saving, making interior cool in summer and warm in winter. It's an environment friendly material.
4. Make the outlook of building more attractive because of the different choice of color.
5. One way mirror effect.

Application

1. 4mm Euro bronze reflective glass is usually cut directly into custom cut size bronze color reflective glass, or made into 4mm Euro bronze reflective tempered glass, used as heat control [window and door glass](#).
2. When it is produced as 4+4mm Euro bronze reflective laminated glass, it's widely used for balcony railing glass, outdoor balustrade glass, etc.
3. 4mm Euro bronze reflective glass can be made into Euro bronze color reflective insulated curtain wall glass.
