

Building curtain wall reflective insulating glass,architectural coating double glazing glass

As we all know,insulating glass is a very effective way to reduce heat transfer through the glazing/window/wall.When insulated glass used low-E and/or reflective coatings,insulated glass units perform even better for conserving energy,[insulated glass](#) are keeping heat in during colder weather and keeping heat out during warmer weather.This innovative glass combines a beautiful reflective appearance with excellent solar control properties.

[Reflective insulating glass](#) advantage:

- High reflectivity for privacy and visual comfort.
- combinations of solar-control and light-transmission levels,as well as a variety of colors.
- Durable hard coating means worry-free handling,stacking,storage,and transportation.
- Can be heat-treated,laminated,bent,or otherwise processed.
- Can be combined with other JIMY glass product to deliver custom-tailored energy performance that meets specific regional needs

Insulated glass production specification:

Glass Max size: 2500mm*4000mm

Glass Min size: 180mm*350mm

Min curved radius: depend on the client's requirement

Glass sheet type:[grey reflective glass](#),bronze reflective glass,green reflective glass,low-e coating glass,screen printing, acid etched, etc.

Glass Thickness(mm): 3mm-19mm

Argon or Air space thickness: 6A, 9A, 12A, 16A,etc.

Spacer Fill: Dry Air, noble gas like Argon, etc.

Glass color: clear,ultra clear (low iron,crystal clear),F-green,ford blue,gray,bronze,golden bronze, etc.

Packing: standard seaworthy wooden crates

Coating double glazing applications

Hotel,hospital,shop mall,police station,outer curtain wall,glass skylight,glass dome,hotel, shopping mall,gymnasium,museum,curtain wall,facade,windows,greenhouse,glass canopy,etc.
