

Good quality 6.38mm color PVB laminated safety glass price

6.38mm color PVB laminated glass

6.38mm color PVB laminated glass is made of 2 sheets of [3mm clear float glass](#) or ultra clear float glass with 0.38mm color PVB. Laminated glass is basically a glass sandwich. It is produced by bonding layers of glass together under pressure and heat, with PVB (polyvinyl butyral). This technique is used to create single sheets of glass with multiple layers.

What's the advantage of 3+3 color PVB laminated glass

The PVB keeps the glass from breaking apart easily and provides high sound insulation. Also, laminated glass blocks nearly 99% of ultraviolet light transmission. Laminated glass is considered extremely safe because it doesn't shatter easily. It also doesn't break apart into large pieces. Broken pieces of laminated glass stick to the internal tear-resistant plastic layer so they stay in one large sheet.

Application of 331 color PVB laminated glass

1. Interior glass partition wall
2. Balustrade
3. Doors or windows
4. Display cases
5. Many others
