Various gradient acid-etching glass picture:

Gradient acid etched glass application:

1, white gradient art glass applied in the bathroom

With a color gradient as the shower room in the bathroom, the looming colored surface will open up a small world where people belong to our own. The nearly transparent glass surface above the glass ensures that the light can enter very well, and the glass as a whole The transparent vision changes the tedium of the transparent glass, while creating a warm bathroom space, but also let the interior full of romantic colors. Therefore, the shower room with a color gradient as a bathroom is the most popular and common way of using progressive frosted glass.

2, Decorative gradient glass for the entrance

Modern people pay more and more attention to the role of the entrance in order to create a warm and comfortable indoor atmosphere. With colored gradient glass as the entrance, the color of the mysterious subtle and transparent glass, the indoor light, the air becomes vivid and full of spirituality, so that people enter the house and feel the rush of artistic atmosphere, the sinking because of work and The increasingly tired heart of life is instantly relaxed.

3, Gradient art glass applied in the background wall

Want to highlight the master's taste, the background wall is indispensable, replacing the traditional murals with colored gradients, seeing the flower-like ripple effect in the fog to make the interior light softer, and the transparent visual effect above the glass makes the interior space It is crystal clear and rich. It fully embodies the theme of today's interior decoration introducing nature, pursuing return to life, and shaping space spirituality.

4, colored gradient glass application for office

In many large-scale shopping malls and office areas, using color gradients to make partitions can not only guarantee the smoothness of light, but also can bring people a sense of tranquility and comfort.
