

China high quality 10mm Low iron U-type glass suppliers

10mm U channel glass be succeed development on 2016 years by our research and development department , its break through the international and domestic of [7mm U profile glass](#)' bottleneck problem. can produce thickness from 6mm to 10mm as per demand.

What is U shaped glass?

U-shaped glass is a special-shaped glass which applied to the most extensive buildings. Due to its U-shaped cross-section, it increases the force of the glass, makes it have higher mechanical strength than the flat glass, and has a large installation span, which can save a lot of profiles. At the same time with the ideal light transmittance of glass; double installation, has a good thermal insulation and sound insulation. The construction is simple and convenient. It is suitable for building exterior walls, interior partitions, and exterior wall decoration, making it one of the standard parts of the building. Many types of U-glass have ideal translucency, heat insulation, heat preservation and high mechanical strength. They are not only widely used, simple in construction, but also have unique architectural and decorative effects, and can save a lot of light metal profiles. It is used by urban and rural architecture in many countries in the world.

U shaped glass can be float glass type or tempered glass type.And its surface can be pattern or smooth, and the glass color can be colorless or colorful as below:
