About 5mm Ford Blue Float Glass

5mm light blue float glass is produced by the float process with addition of a bit quantities of metal oxides to color the normal [5mm clear float glass](#) mix and then enters the cooling bath after floats on the surface of molten tin under the action of centrifugal force and its surface tension, to get the two sides of glass to be smooth and even and ripple to disappear.

The color density of tinted glass is a function of thickness, as the glass gets thicker the density of the color increases and the amount light transmittance decreases. Tinted glass has the features of mild color, absorbing solar radiation heat, saving energy, making buildings colorful, absorbing ultraviolet radiation for reducing the damage to human beings and preventing color from fading, etc.
