

China High quality Laminated fabric glass panel suppliers

What is Fabric laminated glass?

Fabric [laminated glass](#) which is made by two or more layer of glass, bonded together with PVB film or EVA film and other material of Fabric (such as cloth, paper, spun silk, or others). On the surface glass someone would need kiln forming, sandblasting and colour coating to further enhance the design. The beauty, colour and texture of regular woven cloth, delicately constructed textiles or printed fabrics are protected when combined with the structural strength and practicality of glass. Its and ideal product for interior decorative, including of divider/partition, wardrobe, [shower screen](#), cladding and others.

Laminated Glass Features:

1. Safety: After a big impact, the fragment of broken glass will be stuck on the film, which will protect people free of harm.
2. Energy saving: There is a good insulating performance, saving energy
3. Sound insulation: laminated glass with a damping of the acoustic features, is a good insulation material
4. Laminated glass with UV blocking function, prevents indoor furniture, items fade.

Fabric laminated glass specification:

Glass thickness: 4+4mm, 5+5mm, 6+6mm, 8+8mm

Glass surface processed: kiln forming, sandblasting, [silk screen printed](#), etc.

Mid-Interlayer: PVB/EVA, Fabric (cloth, paper, spun silk, or others)

Max size: 3000x8000mm

Min size: 100x200mm

Series Fabric been selection to made the laminated safety fabric glass:

Different design tempered laminated fabric glass for building decoration
