

Pattern decorative textured tempered laminated fluted glass for hotel shower doors

What is fluted glass?

It's a kind of decorative textured pattern glass, with vertical or wavy regular stripes on the surface, and common types include changhong glass and corrugated glass. Its core feature is to form concave-convex vertical stripes or wave patterns on the surface of the glass through roller pressing or mold mold forming process, to achieve the effect of "protect privacy and keep light transmission at the same time", both decorative and functional.

The fluted glass could use as monolithic tempered glass panel, also could be

tempered laminated glass panel, what's the advantages to use the tempered laminated fluted glass for the shower doors?

1. **Privacy:** The fluted texture blurs the contours of objects inside the bathroom, blocking views from the outside and avoiding direct exposure of privacy, while maintaining light penetration.
2. **Excellent light transmission:** Allows natural light to enter the bathroom, enhancing the brightness of the space, especially for windowless or poorly lit bathrooms.
3. **Visual extension effect:** the vertical stripe design can visually pull up the height, enhance the sense of depth of the bathroom space, and relieve the feeling of depression in a small space.
4. **Strong style adaptability:** the clean and sharp lines of fluted glass are highly integrated with modern, minimalist, industrial and other decorative styles, which is both practical and decorative.
5. **Dirty-resistant and easy to maintain:** Compared with frosted glass, fluted glass has a smoother surface, which makes water stains less likely to remain, making daily cleaning more convenient.
6. **Flexible matching program:** can be used alone or laminated with other glass (e.g. frosted glass) as a double-layer structure to further enhance privacy.

PS: If need, we also could supply the installation accessories together

Fluted glass specification

- Size: custom cut to size
- Thickness: monolithic 4mm, 5mm, 6mm, 8mm, 10mm, 12mm, laminated 4+4mm, 5+5mm, 6+6mm, 8+8mm, any customized thickness
- Color: normal clear, ultra clear low iron, gray, bronze
- Processing: polished edges, drill holes, cut notches, frosted, etc.
- Packing: strong export plywood crates
- Production time: 10-15 working days after order is confirmed

Fluted glass other application

(i) Architectural field

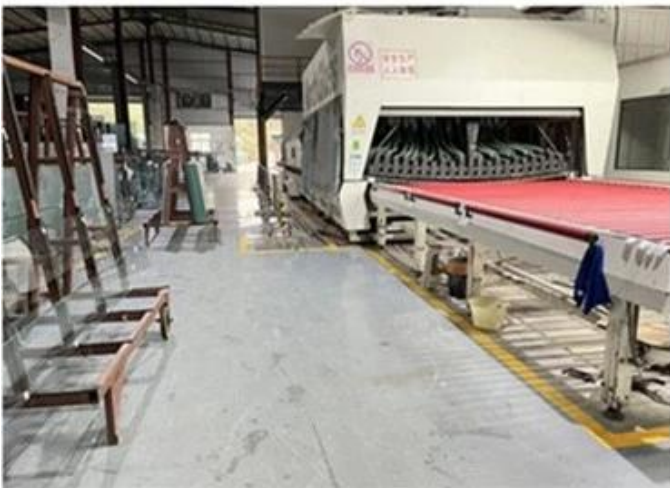

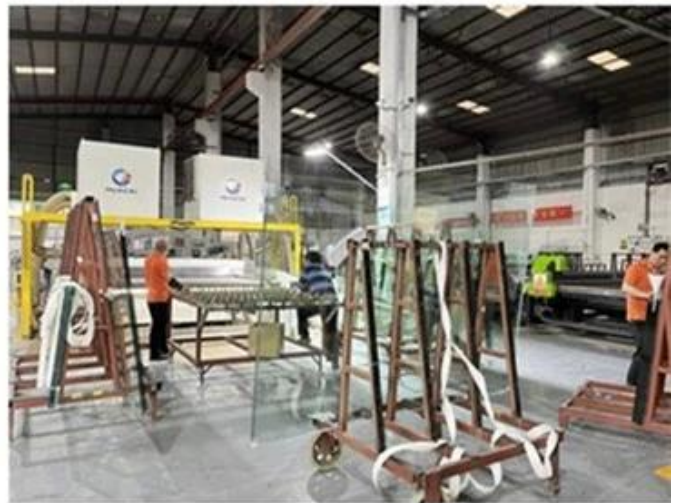

- Facades and windows: used for building facades or windows to balance the need for light and privacy.
- Space partition: used as a glass partition in office and commercial spaces to divide areas without blocking light.
- Staircase handrail/roof lighting: both safety protection and decorative function.

(ii) Home application

- Partition and sliding door: commonly used as glass door or partition in kitchen, bathroom, balcony and other spaces to enhance the sense of permeability.
- Cabinet door: used for customized cabinet glass door, weakening the sense of clutter inside the cabinet.
